TESTING

AUDITORY STEADY STATE RESPONSE (ASSR)

Connect the electrode cable to the white connector.

Connect the transducer to the appropriate connector:
- Headphones or insert earphones: blue connector
- Probe: red connector
- Second probe for binaural testing: blue connector

Clean the patient’s skin and place the electrode pads. Connect the clips to the corresponding sites. Recommended montage is:

- White: high forehead
- Black: cheek
- Red: mastoid

For binaural testing, place red electrode on the nape.
If you are using an ear probe or insert earphones, select the appropriate ear tip size and place it on the probe tip. Insert the probe in the ear making sure that the ear tip fits tightly into the ear canal.

If you are using headphones, place them over the ears.

Select ASSR

Select the protocol you would like to use. To change the parameters, select one of the presets and then the tools button at the bottom of the page:

**CONFIGURABLE TEST PARAMETERS**

- **Fixed**: will test all selected levels
- **Adaptive**: used for threshold search

Select start, minimum and maximum lever for adaptive mode

Select masking noise (monaural testing only)

40 Hz: awake and adult patients
80 Hz: babies and higher frequencies

Auto: mixed rate, optimized for performance
Select the test ear by pressing either the Right or Left button, or Right + Left for binaural testing. Binaural testing is available when headphones, insert phones or two ear probes are connected.

Make sure the patient is sitting or lying down comfortably.

An impedance check will be performed prior to measurement. If impedance is below 6 k ohm, the start button will become available. You can configure the settings for the test to autostart if the impedance is lower than 4 k ohm. If impedance is higher than 6 k ohm but below 12 k ohm, a skip button will become available. An impedance below 6 k ohm is recommended for best test results.
If you are using an ear probe, a calibration will be performed together with the impedance check. You can select the simple calibration or the expert calibration mode in the device set up.

**ASSR TEST SCREEN**

- Progress for each tested frequency
- Overall EEG, value should remain in the lower third. Press to enable raw EEG view
- Impedance monitor
- Frequency being tested
- Intensity level being tested
- Progress
- Stop test
- Pause ongoing test
- Skip this single test
ASSR TEST RESULTS

Please note that the estimated audiogram is only available in the adaptive test mode.

Note: These circles indicate that other screens are available to view.Swipe your finger right or left to get other views.

Print results to a label or to a pdf file

Press on a check mark or circle to view details
