This document provides information on how to set up the general parameters on your Sentiero device. For information on how to set up parameters and run specific tests, please refer to the Quick Guide corresponding to that particular test.

From the start menu, select the Tools icon to access the device general settings. Please note that the start menu will vary depending on your device configuration and settings.

The Settings menu will show the following options:
From this menu, you have the following options:

1. Date and time

   Select current date and time, and date and time format

2. Look and feel

   Select the device language
Sound / Brightness

Select whether you want the device to make a sound when you press a key, and the display brightness. Please remember that a higher brightness level will reduce the battery charge.

Energy options

Select how many minutes after no user interaction on the display the LCD should timeout, and how many minutes after no user interaction on the display the device should automatically turn off.

Start menu

Select the preferred start screen options.
Select the screen you would like to see when you turn on the device: List of patients or list of modules. If you select list of modules, the device has the option to display the list of all the modules that are active on your device, or your favourites (i.e. the ones that you use most often). The list of Favourite modules may be updated every time you use the device, or locked to always show the same list.

Start Menu option 1: Patient list

When Patient list is selected as Start Menu, the list of patients saved on the device will be displayed when you turn on the device.

Start Menu option 2: Module selection – complete module list

When Module selection / Complete module list is selected as Start Menu, the list of all the modules activated on the device will be displayed when you turn on the device. Please remember that the module selection will vary depending on the modules that are enabled on your device.
Start Menu option 3: Module selection – favourite modules and presets

When Module selection / Favourite modules, presets is selected as Start Menu, the list of the test modules and presets that you have used will be displayed when you turn on the device.

If you select On to auto update favourites, the list will change every time you use a new test module or preset.

If you select Off to auto update favourites, the list will be locked and will not change.

Keyboard preferences

Select the keyboard layout that you prefer for patient data entry
3. Data management

Select whether you want to delete specific patients, data prior to a certain date, or all data stored in the device.
